## **1. Prologue/ Introduction of the programme: At least one page**

Students from arts and science stream can

Web development could be a good profession for all students if they like solving logical problems, building useful things, and experimenting with new technologies. Web developers are in high demand, generally have a good work/life balance, and command comfortable salaries. Web development work could be in the front end, the back end, or the full stack.

Web development refers to the creating, building, and maintaining of websites. It includes aspects such as web design, web publishing, web programming, and database management. It is the creation of an application that works over the internet i.e. websites.

Large tech companies, such as Google, Meta, and Amazon, have very stringent hiring requirements. If students successfully meet these expectations, they offer excellent pay, benefits, and opportunities.

As a freelancer, students could command a strong hourly wage and the freedom to schedule and design their own products. Strong people skills are necessary for this path.

Another career is as a consultant for a web consultancy, any one would give up some of his/her freelancing wage potential but be able to focus more on the code and less on the hustle. This option also provides a good work/life balance and pay.
